

ERRATA

Producer Manual - Good Production Practices Ver. 1.0

2.4.6 Processing Equipment

- b) No new or reconditioned processing equipment inputs, that are damaged, punctured, or with indications of being cross-contaminated with chemicals (e.g. petrochemical-based products) as a result of fouled transport carriers, equipment and/or mishandling in transit are **rejected** **accepted** for use upon delivery (not unloaded).

3.7.4

Packaging materials intended for use with food that is contaminated from contact with pests, other biological contaminants, or chemical contaminants, must not be used, **and** are properly disposed of following **and** actions documented within the *Storage - Monitoring and Corrective Action Record* (FORM 3.0.1).

5.5 CONTROL PROCEDURES

5.5.1 Removing Full Honey Supers

a)

All hive handling equipment and honey supers must be visibly clean and free of dirt residue or particulate matter (i.e. soil). If dirt is detected, ensure that it is removed correctly (i.e. scraping, brushing, and/or washing, as warranted) before supers are removed. Ensure hive handling equipment and honey supers are placed on upended hive top covers or clean pallets to avoid contamination with dirt or other soil residue. During handling, ensure that honey supers do not come in direct ground contact with soil, dust or vegetation. Related hive handling equipment must be visibly clean and free of any dirt residue.
